Main Advantages

- Low cost with short pay-back period
- Seamlessly integrated into existing PLC/SCADA/DCS
- Efficient unique patented Off-line cleaning
- Superior Marplug™ designs
- Safe
- Uses standard detectors
- Custom and standard pipe sizes
- Sanitary, Hygienic or Aseptic

*Free Demonstration CD
available on request*

Martec Newsletter Spring 2006

Pipeline of Orders

Martec continues to provide Product Recovery Systems for well known companies throughout the UK. These include repeat orders from Boots Manufacturing, Colgate and many others. Martec is also now offering maintenance and service contracts.

Fruitful Success

Martec, as an associate consultant to the Manufacturing Advisory Service (MAS), has successfully completed a feasibility study identifying improvements in equipment and operation practises for Belvoir Fruit Farms.

Successful implementation of these by Martec has enabled them to improve

throughput and reduce losses.

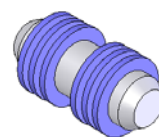

Pull the Other One

A uni-directional manual system has been deployed to pull a cable through a pipeline. The tailored design employs a 'Hatch Trap' Launch Station that allows operators to directly insert the Marplug into the line and attach it to a steel wire tether. Once sealed and launched, the Marplug pulls the cable through from the mixing tank, to the receive end where it is removed and the oceanic umbilical cable pulled back through pipe.

Cleaner Lines

A pharmaceutical company in the South of England has replaced its brand new pigging system with a Martec Product Recovery System because of the unacceptable amounts of residual product left on the side walls of the pipe by the semi-rigid pig. The 'windscreen wiper' action of the new Marplug demonstrated its unrivalled cleaning action. QED.

Beer production tastes sweeter

Syrup offloading is an increasing area of concern for brewers and food manufacturers alike. The suppliers of the syrup are now charging the customer for the disposal of syrup that runs back into the tanker after delivery. A Brewery has purchased a Martec system that not only purges appreciable amounts of syrup into the holding tanks, but significantly reduces its overall return tankering & waste treatment costs.
